

9 OPERATION GUIDE

The araya⁵ Dynamic Dimming Modules DDM 0ND and DDM 0TD utilize standard 0-10V building controls for controlling dimming values. The modules deliver tunable white light that warms as it dims, launching at 3050K at full intensity to 1800K at 1%.

0-10V Control. The DDM has 0-10V control wire pairs to control Dimming. Dimming is controlled by the violet (+) and gray (-) wires.

For long term reliable operation, proper heat sinking is critical.

The DDM dome diffuser is fragile. Avoid touching the dome diffuser during handling and assembly.

Do not rest or operate the DDM face down against a table or other solid surface.
